TIMELINE

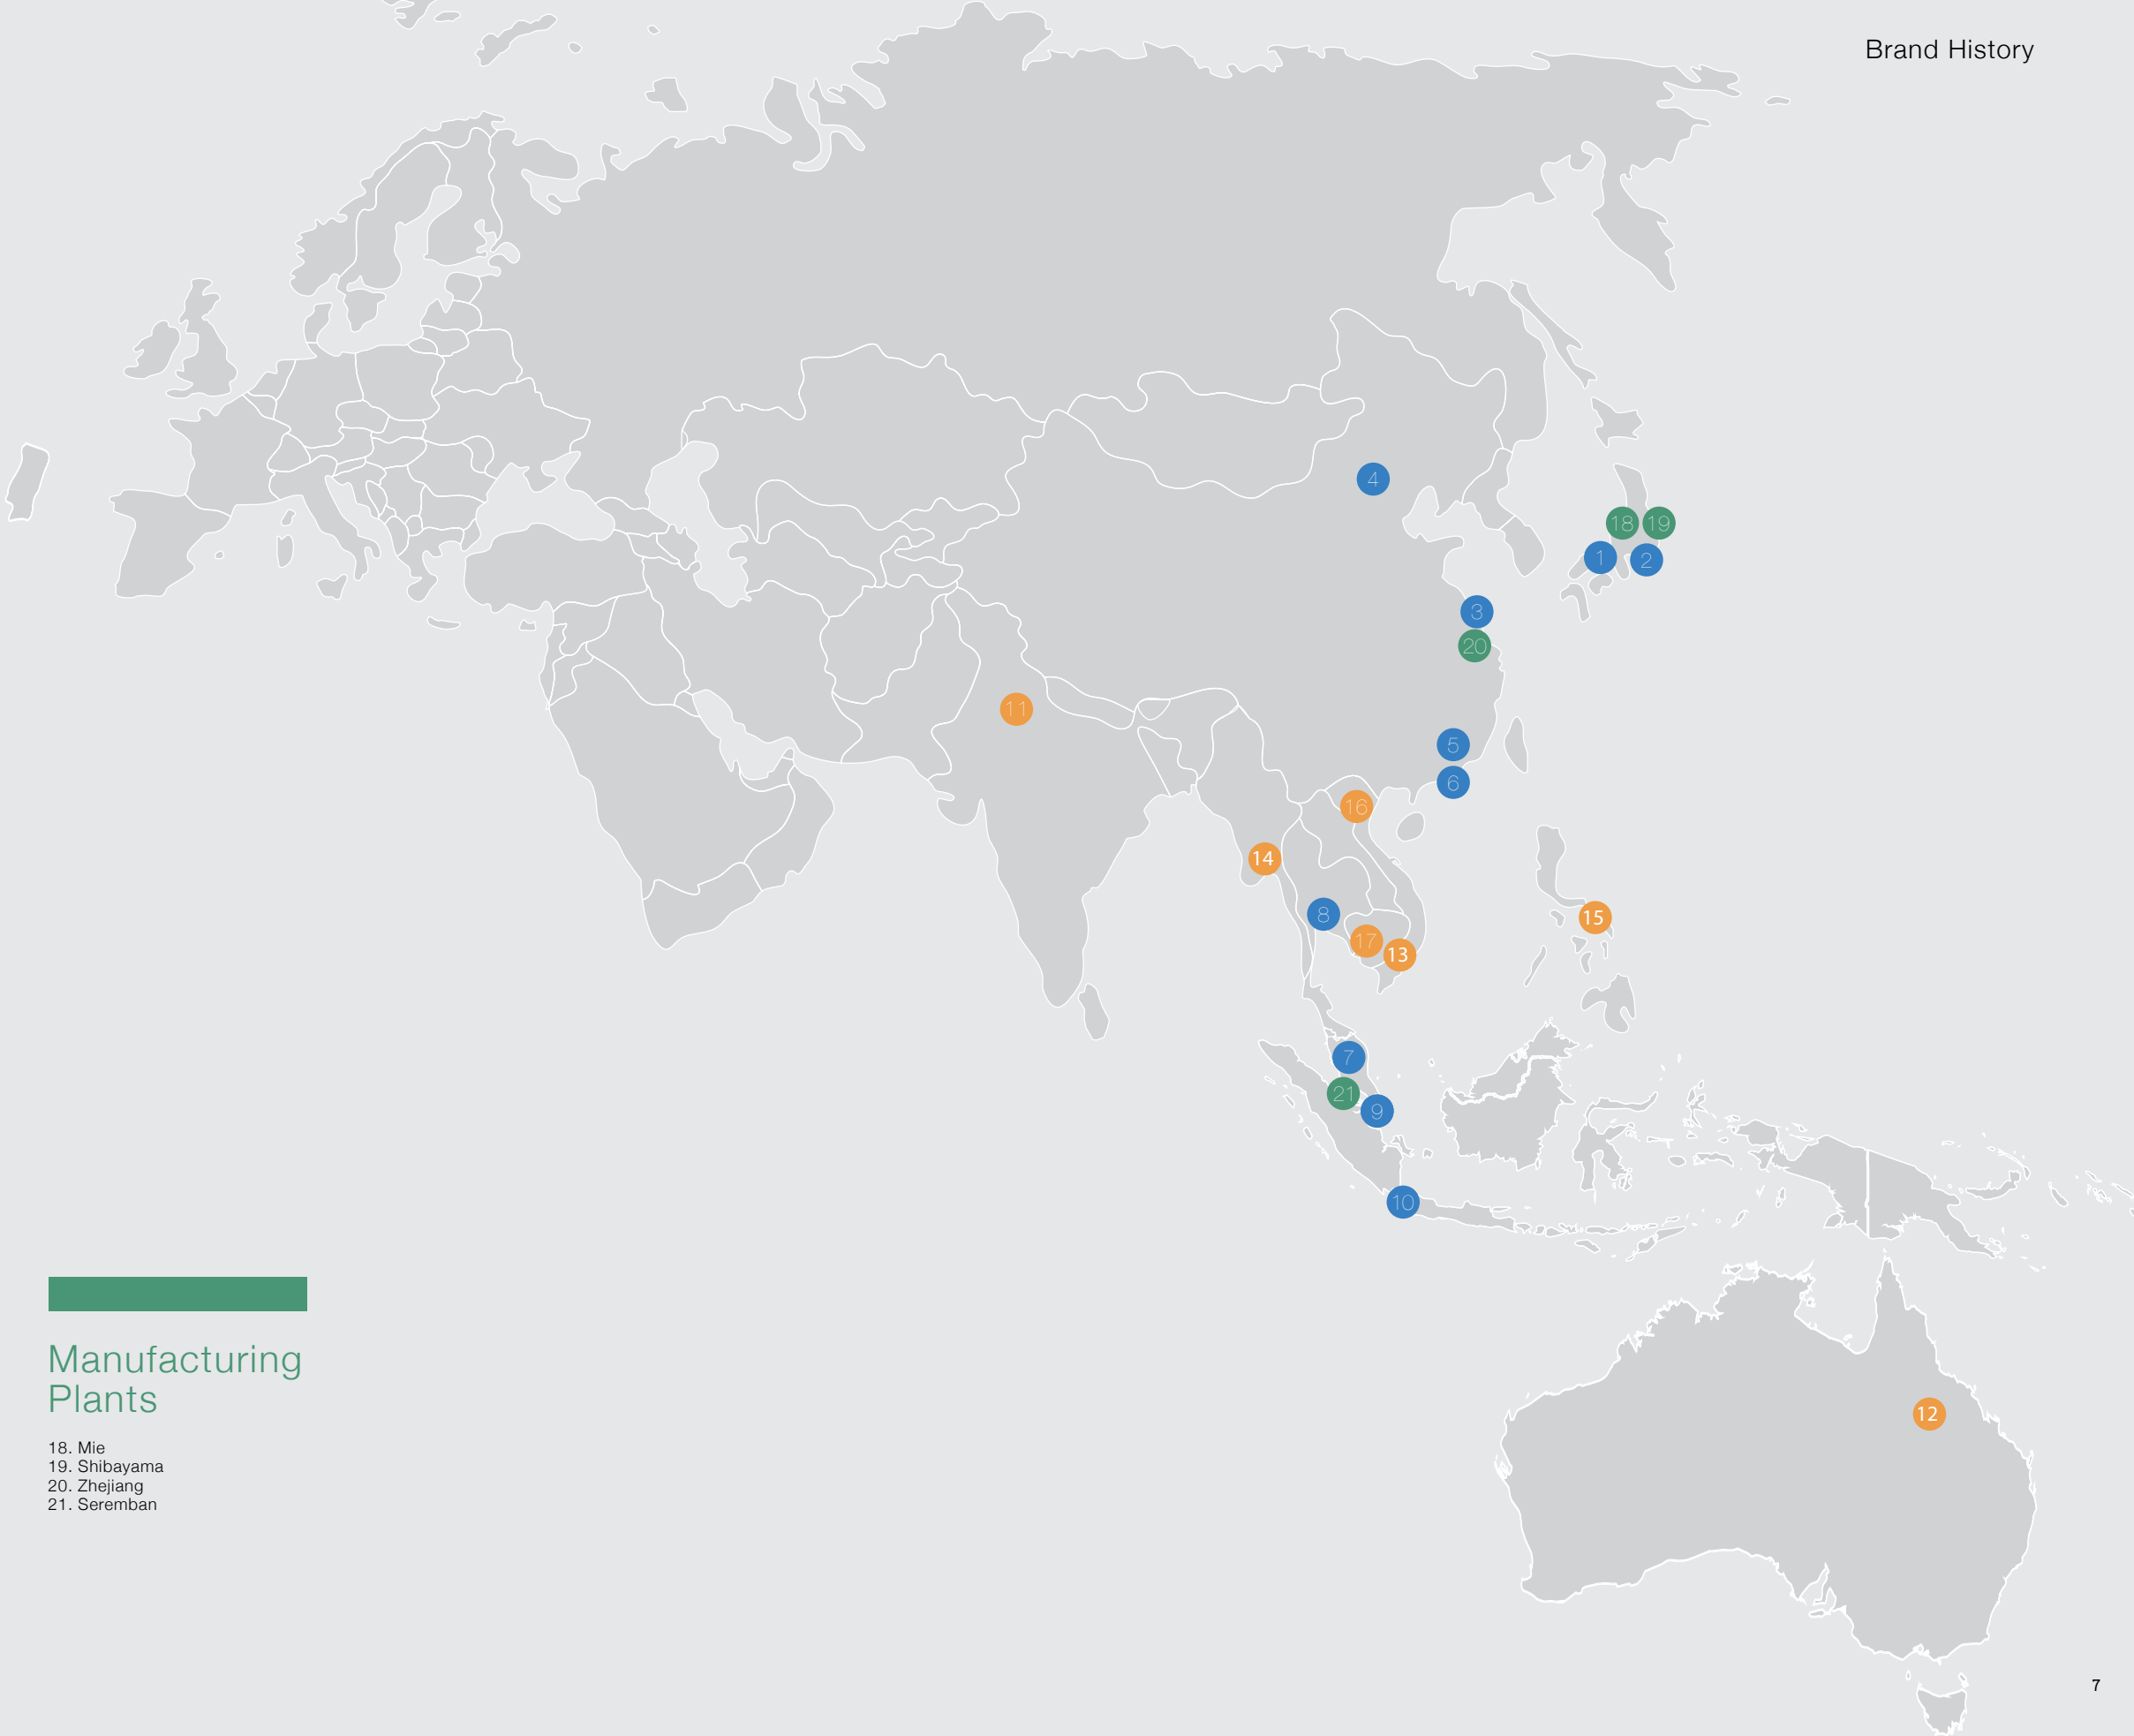

For KOKUYO,  
  
Creativity means  
solving the small  
problems people  
encounter in their  
work and daily  
lives, one by one,  
through the use  
of creative ideas.

1905	1927	1950	1960	1969	1983
KOKUYO was founded in 1905 by Zentaro Kuroda, which marked the beginning of retail outlets specializing in the sale of Zentaro Japanese-style account book ledger.	Collaborating with renowned Japanese painters on a new product innovation, KOKUYO begins to add designs and illustrations to its stationery.	KOKUYO's first commercial dealer was established in Tokyo.	In 1960, KOKUYO introduced the document filing cabinet, and in 1961 it released the card filing cabinet.	The construction of the Osaka head office completed this year. Work areas were open to viewing, to show the public how this steel furniture company was being transformed into a full-product office furniture company.	Biotech office swivel chair was put on sales.
2008	2008-10	2012	2013	2015	Next 100 Years
The Live Office in Shinagawa, designed on the basis of the concepts of "eco-friendliness" and "creativity" formally opens in Shinagawa.  Incorporates equipment, products and software which reduce carbondioxide emissions by means of various design innovations.	In 2008, KOKUYO becomes a sponsor of the Beijing Olympics.  In 2010, KOKUYO becomes a participant in the Japanese Industrial Hall at the Shanghai Expo.	Founded Singapore first ever Showroom cum LIVE office.  Opening of Shanghai Flagship Showroom in the heart of the city.  Started Creative Lounge MOV at Shibuya.  A co-sharing workspace.	Opening of Jakarta KOKUYO Showroom.	The merger of KOKUYO Stationery and Furniture business.	

# Global Footprint

Taking a step forward to be the honor of Asia, we were determined to bring our products outside of Japan. With this mentality and objectives, we set off by starting our manufacturing plants and sales offices oversea. With the overseas manufacturing plants, we were able to produce products based on the locals markets' requirements and specifications.

# SAIBI

Aesthetics Meet Function at Work Seeking for utility and yet pleasing to sensibility, the philosophy for the next office lies behind this refined design. True comfort lies in the marriage of beauty and function. SAIBI implies beauty in both style and detail. Office space evolves towards greater quality.

# A brand new perspective in your office space.

SAIBI is more than just office furniture. It belongs to a management instrument in an era of an ever changing work culture. SAIBI is designed to bring solutions for working as a team or individual work, where collaboration, generate of new ideas and sharing of information take the center stage. It truly reflects the dynamism of the modern office, in this sense. SAIBI gives office planning a brand new perspective.

# BSM2

Japanese's quality standard desk perceptively designed with wiring and storage. The BSM desk system offers useful wiring and storage functions, as well as options to make basic and everyday use a joy.

Details

- 1

**Rotate the wiring cap on the desktop**

To open up a large wiring pit through which OA connectors and grounded sockets pass easily.
- 2

**Central drawer**

The drawer holds B4 papers lengthwise.

Effective depth 382 mm  
Effective opening depth 300mm
- 3

**Lock**

That indicators “locked” state one glance tells you what the locking status is - red for locked and blue for unlocked.
- 4

**Side drawers**

One drawer holds up to five A4 folder boxes (A4-LFD), and the design allows easy removal of files from the back of the drawer.

Accessory Options

- 1

**Cable storage box**

Wiring bos lets you neatly organize large-capacity wiring.
- 2

**Under-table shelf**

Lets you make the most of space below the desk as A4 files can be stored upright like books.
- 3

**Height adjuster**

Replacing adjusters provides a tabletop height of 720mm.
- 4

**Panel**

Use desktop panel and side panels to create an easy-to-concentrate-in work environment.

# UPTIS

Designed with precision. Say goodbye to neck and eye strains with the new UPTIS desk. An adjustable work desk designed to align with your ideal posture while you work.

# Keep your mind upward with a body-friendly posture.

Angle-adjustable workstation to support posture and improve well-being.

Compared to flat desk surfaces, UPTIS adjustable features help to reduce fatigue and stress to the neck, shoulders and even the eyes. When users tilt UPTIS' top plate to the ideal angle, it has been discovered that muscle strain on the neck is reduced up to 70%, thus contributing to better posture. Additionally, the eyes are protected too as the screen is at a comfortable level.

## Details

- 1

**Top plate edge**

The rounded supraorbital edge to lay hands on perfectly. Paper materials and stationery are hard to fall when the top plate is tilted.
- 2

**Basket / Tray**

The basket type is for those who go around in office frequently, and the tray type for those who want to spread the documents are recommended.
- 3

**Desk mat**

Desk mat that PC and mouse are not slippery. If you place it vertically, you can use it comfortably.
- 4

**Wiring**

The wiring cover can be removed for smooth access to the power supply. The OA tap can be stored in the wiring tray or placed on the wiring cover according to the frequency of use.
- 5

**Top plate mechanism**

We set the margin under the top plate for easy operation. With a damper to soften the slam when levelling the top plate.
- 6

**Design**

The design that supports the active work and adjust with the office space. The stylish form of the legs gives the space casual impression.
- 7

**Utility tray**

OA taps, smartphones, tool pouches, etc. can be placed, supporting effective use of the top plate space and usability.
- 8

**Desktop panel**

A frameless and simple design are the main characteristics. You can also attach the magnet.

KOKUYO *ing*  
360° Gliding Chair

Beneath the seating surface of ing is equipped with a gliding mechanism which freely moves 360 degrees according to the subtle movement of the human body. It follows a forward tilt and backward tilt, up to left and right and diagonal twists, by a combination of two layers of mechanisms. It brings out natural movements of human beings and activates the body and brain.

# The human body is built to MōV E

Humans are creatures that love to sit. However, the human body is not built to continue sitting for a long time to work on the computer. There are more than 360 joints and about 700 skeletal muscles in the human body, and as they move, they enhance the performance of nerve cells.

In short, the human body is built to move, KOKUYO's "ing" was born out of this mechanism.

# Wizard3

# Long-selling series that continues to evolve in response to changes in the work scene

Equipped with a dual motion mechanism that combines two movements. The rocking support of the back seat angle supports large movements of the body, for example, when the posture is greatly changed and relaxed during work. The small movements of the body that occur during intensive work are caught by the upper tilt, implementing an exquisite balance between support and fit.

Upper tilt mechanism

Only the upper part of the backrest moves flexibly. The upper tilt mechanism follows small movements of the body and greatly improves the fit. Tilt angle: 10 degrees

Backseat angle interlocking locking

The back seat angle interlocking locking, which interlocks the back seat and comfortably supports large body movements. Locking angle: 20 degrees

## Crank slide arm that can move to fit the best position of elbow.

Renewed horizontal movement of elbows to support diversified working postures. In both upright and leaning positions, a large backward sliding movement has been added to allow the armrest to move closer to the body. The mechanism that moves smoothly in circle, and the 3D curved armrest, flexibly supports the changes in working posture.

## Details

1

### Posture support sheet

The base layer of the seat is provided with a surface shape that supports the pelvis, and a cushion layer is placed on top of it to implement both a stable posture and a feeling of moving around. It prevents slippage of the pelvis, which is one of the causes of postural collapse, and ensures proper long-term work by dispersing body pressure.

2

### Lumber support

"Lumbar support" that can adjust the shape of the backrest surface according to individual differences is equipped as standard. By sliding the lever in the horizontal direction, two-layer switching is possible according to the "I" shape of the spine, which is almost flat, and the "S" shape, which has a large curvature.
